

TRIM-JET™

SLITTER & TRIMMER VALVE UPGRADE

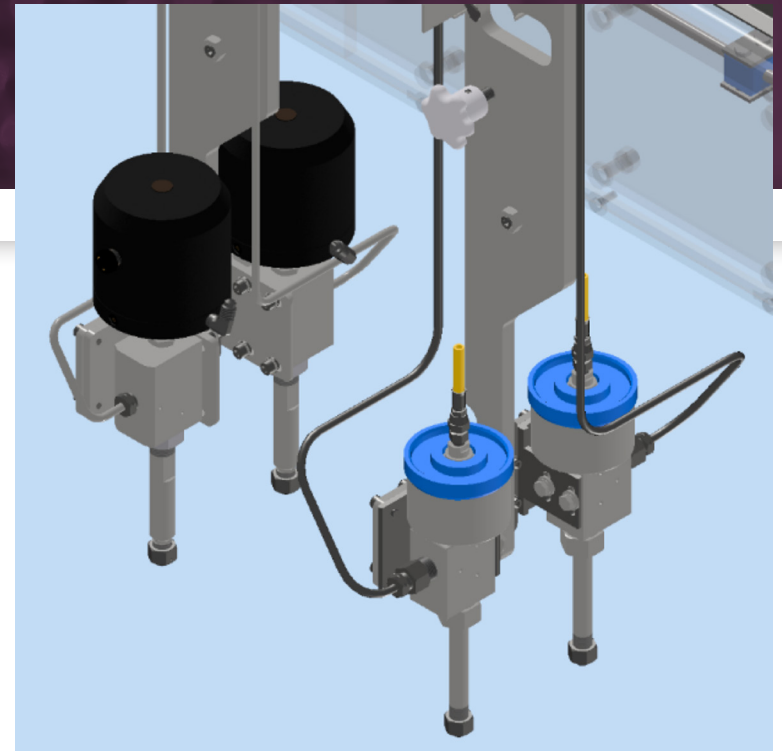

Older Trim-Jet™ models are equipped with slitter & trimmer valves that are expensive to repair, time consuming to rebuild and susceptible to fluctuations in air pressure.

Paprima is now offering a new model, which has many advantages when comparing to the older model.

- More compact and reliable
- Better cut quality - combined with an air booster
- Has a longer service life - up to 2x compared to older model
- Easier to rebuild, resulting in less downtime
- Faster reinstallation per station
